

BUILDERIQ REBATES

Stop leaving rebates on the table.

Manufacturer programs pay builders for the products they install. BuilderIQ Rebates finds every home that qualifies, shows you when each rebate can be submitted and tracks it until it's paid.

Key capabilities

- **Rule-based rebate definitions.** Capture each program once, by manufacturer, with rule types, formulas and versions, so one definition covers many homes.
- **Automatic job assignment.** Rebates are matched to jobs from purchase orders, estimate items, options and schedule milestones, and each gets its submission-eligible date.
- **Job and non-job rebates.** Track per-home rebates alongside program or volume rebates that aren't tied to a single job.
- **Submission packages.** Build packages by hand or generate them from everything that's eligible, with invoices, photos and forms attached.
- **Payments and reconciliation.** Record payments and follow every rebate from assigned to eligible, submitted and paid.
- **Dashboard, reports and audit trail.** See what's eligible, pending and paid by division and community. Process logs show what ran and when.

At a glance

BUILT FOR

Rebate, purchasing and accounting

DATA IN

Jobs, POs, options and milestones, synced from your systems

HOSTING

Microsoft Azure, managed by BuilderIQ

SIGN-IN & ACCESS

Microsoft Entra ID single sign-on, access by module

WORKS WITH

BuilderIQ Estimating & Purchasing

PROVEN

In production with a regional homebuilder

How it works

01

Define your programs

Enter each manufacturer program once. Versions keep history clean when terms change.

02

Assign automatically

BuilderIQ checks your job data and assigns every rebate a home qualifies for.

03

Submit and reconcile

Package eligible rebates with documents, then record payments as they arrive.

Built on the BuilderIQ platform

STANDARD

Proven modules

Built for builders, not accounting or ERP software bent to fit. Improved for every customer.

CONFIGURED

Your structure and rules

Divisions, communities, plans, programs and users, set up to match how you operate.

CUSTOM

Where it counts

Custom modules, integrations and reports, built on the same platform by the team that builds it.
